

Essential Knowledge	Teaching Points
<ul style="list-style-type: none"> <li>• Distinguish between events which are impossible, unlikely, even chance, likely, and certain to occur;</li> <li>• Mark events and/or probabilities on a probability scale of 0 to 1;</li> <li>• Write probabilities in words or fractions, decimals and percentages;</li> <li>• Find the probability of an event happening using theoretical probability;</li> <li>• Use theoretical models to include outcomes using dice, spinners, coins;</li> <li>• List all outcomes for single events systematically;</li> <li>• Work out probabilities from frequency tables;</li> <li>• Work out probabilities from two-way tables;</li> <li>• Record outcomes of probability experiments in tables;</li> <li>• Add simple probabilities;</li> <li>• Identify different mutually exclusive outcomes and know that the sum of the probabilities of all outcomes is 1;</li> <li>• Using <math>1 - p</math> as the probability of an event not occurring where <math>p</math> is the probability of the event occurring;</li> <li>• Find a missing probability from a list or table including algebraic terms.</li> <li>• Find the probability of an event happening using relative frequency;</li> <li>• Estimate the number of times an event will occur, given the probability and the number of trials – for both experimental and theoretical probabilities;</li> <li>• List all outcomes for combined events systematically;</li> <li>• Use and draw sample space diagrams;</li> <li>• Work out probabilities from Venn diagrams to represent real-life situations and also 'abstract' sets of numbers/values;</li> <li>• Use union and intersection notation;</li> <li>• Compare experimental data and theoretical probabilities;</li> <li>• Compare relative frequencies from samples of different sizes;</li> <li>• Find the probability of successive events, such as several throws of a single dice;</li> <li>• Use tree diagrams to calculate the probability of two independent events;</li> <li>• Use tree diagrams to calculate the probability of two dependent events</li> </ul>	<ul style="list-style-type: none"> <li>• Use this as an opportunity for practical work.</li> <li>• Remind students probabilities written in fraction form should be cancelled to their simplest form</li> <li>• Emphasise the use of the 0–1 scale to measure probability.</li> <li>• Encourage students to write a list of all the outcomes for an experiment.</li> <li>• Make sure students know and apply the fact that the sum of probabilities for all outcomes is 1</li> <li>• Probability without replacement is best illustrated visually and by initially working out probability 'with' replacement.</li> <li>• Encourage students to work 'across' the branches working out the probability of each successive event. The probability of the combinations of outcomes should = 1.</li> <li>• Emphasise that were an experiment repeated it will usually lead to different outcomes, and that increasing sample size generally leads to better estimates of probability and population characteristics.</li> </ul>
<b>Assumed Prior Knowledge/ Links / Interleaving</b>	
<ul style="list-style-type: none"> <li>• Students should know how to add and multiply fractions and decimals.</li> <li>• Students should have experience of expressing one number as a fraction of another number</li> </ul>	

<ul style="list-style-type: none"> <li>• Students should be able to convert between fractions, decimals and percentages</li> <li>• Students should be able to create a two way table and apply this knowledge to sample space diagrams</li> </ul>	
<b>Potential Barriers to Access / Misconceptions</b>	<b>Opportunities for Reasoning/Problem Solving/Proofs</b>
<ul style="list-style-type: none"> <li>• Not using fractions or decimals when working with probability trees</li> <li>• Not being able to express ratios as fractions</li> <li>• Students incorrectly multiply decimals eg <math>0.3 \times 0.4 = 1.2</math></li> <li>• Students incorrectly multiply fractions and find a common denominator instead</li> <li>• Students understanding of even chance is limited, if 3 options are given and they all have the same chance students often believe this is even as they are all the same</li> </ul>	<ul style="list-style-type: none"> <li>• If the probability of outcomes are <math>x, 2x, 4x, 3x</math> calculate <math>x</math>.</li> <li>• Calculate the probability of an event from a two-way table or frequency table.</li> <li>• Decide if a coin, spinner or game is fair</li> <li>• Students should be given the opportunity to justify the probability of events happening or not happening.</li> <li>• Lotteries provides a real life link to probability. Work out the probabilities of winning on different lotteries</li> </ul>
<b>Key Mathematical Vocabulary</b>	Probability, dependent, independent, conditional, tree diagrams, sample space, outcomes, theoretical, relative frequency, fairness, experimental
